

## 2b: Smart Tv and Remote

Tasks that remote controllers should have are:

- Voice control
- Touch screen capabilities
- Wand control similar to the Wii
- Simpler button designs

There are some current remotes that do these tasks. The apple TV remote is a great example of a simple and effective remote. There are only a handful of buttons and there is a touch sensitive trackpad on the new remote as well. XFINITY tv services also offers a remote with voice control which is extremely useful for completing tasks.
